

Introducing Myself to the World of Web Development

Website Design for Mantra Academy

My Personal Story

Howdy!

So, here's the deal. If you're ready to dive into a story that's part comedy, part chaos, and all about my beginning days in web development, stick around. And if you'd rather not, no hard feelings; feel free to skip. I won't be offended (okay, maybe just a tiny bit 😊).

Year 2020. Reminds you of something? Yeah, we both recall the same thing. That unique year, I decided to stumble upon a world that would change a lot of things - the fascinating realm of web development. And, this specific project was my first task where I got to implement my concepts to create something that, at least looks like a website. My journey into this captivating universe began with this project that, to this day, holds a special place in my heart.

To be totally up front, as I look back at this project, I can't help but cringe a little. The code I wrote then was far from perfect. It was a jumble of redundancy, lacking the finesse and techniques that I now know. But you know what? I don't mind at all. In fact, I smile when I think about those days. Why? Because it represents something I'll always be proud of - my unyielding desire to learn and my determination to keep trying.

My Personal Story

When a global pandemic named COVID-19 descended and turned everything upside down, the world became a very different place, and it was easy to feel lost and uncertain. But it was a bit different for me. With time on my hands and a burning curiosity for the digital world, I decided to dive into the world of web development: a bit ahead of my college curriculum.

Looking back at it now, this project 'Mantra Academy' might not have been a masterpiece. It was more like a rough draft of a beautiful story, filled with errors and imperfections. But that's what makes it so special. It's a reminder of my journey, my growth, and the sheer joy of learning something new.

Today, every time I open this project folder, I smile. This project is a story that I'll cherish for years to come and a testament to the power of curiosity and determination.

So, even if things are tricky, and even if our first tries aren't perfect, they're definitely worth trying.

Abstract

- Design and development of an academic website using HTML, CSS, and Js
- Aims to provide essential information, engaging graphics, and event updates to its audience
- Undertaken evaluation processes, and planned future enhancements

Introduction

- Focused on the development of an academic website using HTML, CSS, and Javascript
- Designed for Mantra Academy, an educational institution
- Sought to expand its global presence, and we were entrusted with creating their online presence

Objectives

- Offering quality information about the organization and its courses to a wider audience
- Promoting digitalization and appealing to the tech-savvy generation
- Enhancing interactions between the organization and its students
- Facilitating online connections between the organization and potential students

Problem Faced by the Organization

The absense of a website posed several challenges, including:

- Inability to provide comprehensive information about the organization
- Limited visibility of the organization
- Difficulty in connecting with interested students
- Challenges for students living far from the organization

How the Website Solves the Problem

Our website addresses these issues by:

- Making essential organization information readily available
- Simplifying the admission process, allowing direct communication
- Enabling feedback collection
- Overcoming technical challenges such as browser compatibility and slow loading times

Target Audience

Current & Prospective
Students

Teachers

Guardians & Caretakers

Future Enhancements

- Enhancement in data storage
- Integration of User Login and Personal Customization
- Features such as direct inquiries and assistive chatbots

Hey, you! I've got a small message

I'm super excited to share with you that there's more to this story than what you see here! This is just the tip of the iceberg, and the real adventure lies in the pages of our project report.

In our project documentation, you'll uncover the hidden gems of our journey, like the major sections of our website – it's like exploring a treasure map, trust me!

We've also created storyboards that are as cool as your favorite comic books, and website architecture that's like the blueprint of a magical castle. And don't even get me started on our website designs.

So, while you've had a taste of our adventure today, remember that the real magic is yet to come. Everything you're curious about, from the sections of our website to our creative storyboards, the design secrets, and the website's master plan – it's all hidden in our project report.

Do check that.
